

A custom connection for post-beam combinations at medium design loads.

MATERIAL: PC—12 gauge; PC-16—16 gauge

FINISH: Galvanized. Some products available in Z-MAX; see Corrosion Resistance information below.

INSTALLATION: • Use all specified fasteners; see General Notes.

- If 9/16" tooling holes are bolted, no additional load is achieved.

OPTIONS: • For end conditions, specify EPC post caps, providing dimensions are in accordance with table; see illustration.

- Some PC and EPC models are available in rough sizes.
- For heavy duty applications, see also CC series.

CODES: See page 8 for Code Listing Key Chart.

1. Allowable loads have been increased 33% and 60% for earthquake or wind loading with no further increase allowed; reduce where other loads govern.
2. Lateral loads are in the direction parallel to the beam.
3. Allowable loads are for nails only.

4. Uplift loads do not apply to splice conditions.
5. Spliced conditions must be detailed by the specifier to transfer tension loads between spliced members by means other than the post cap.

Typical EPC End Post Cap Installation
